

LEVELBROOK CONSULTING

Patrick Donahue — Senior Front-End Engineer · React / Modern JavaScript

REACT · ES6+ JAVASCRIPT · HTML5 & CSS3 · RESPONSIVE & PIXEL-PERFECT UI · CORE WEB VITALS · WORDPRESS / SHOPIFY

Renton, WA · Pacific Time · levelbrookteam@gmail.com · (786) 471-4419 · consulting.levelbrook.com · github.com/tachyurgy

SUMMARY

Senior software engineer with a deep front-end track building **responsive, pixel-perfect web interfaces in React and modern ES6+ JavaScript**. I turn design comps into clean, accessible HTML5/CSS3, ship client-facing dashboards and marketing sites, and care about the details that make a page feel fast and finished — **Core Web Vitals, cross-browser behavior, and Chrome DevTools-driven debugging**. Comfortable across the full delivery surface: component architecture, hand-written CSS and Bootstrap, jQuery on legacy pages, WordPress/Shopify front-ends, and the PHP/MySQL/AJAX glue behind them. I use AI tooling (Copilot, Cursor) to accelerate boilerplate and troubleshooting without losing the craft. Remote-first for over a decade, available full-time 9–6 PST. Most recent work: **Beacon**, a React SEO & Core Web Vitals dashboard (live demo + source below).

FEATURED FRONT-END WORK

› **Beacon — SEO & Core Web Vitals Dashboard**

React + Vite client dashboard: animated SVG score rings, Core Web Vitals scoring, on-page SEO audit, sortable rankings. Fully responsive, light/dark. **Live demo**.

› github.com/tachyurgy/beacon-seo-dashboard

Source for Beacon — hand-coded SVG charts, no UI kit, real media queries, ES6+ throughout.

› **LinguaGuessr**

React browser game (the “GeoGuessr for the ear”): audio UI, interactive map, daily rounds, mobile-tuned layout.

› **equipment-cluster viewer**

React image-cluster explorer over a 20k-image ML pipeline — responsive grid, lazy loading.

› consulting.levelbrook.com/writing

Engineering write-ups, including the build notes for Beacon.

› github.com/tachyurgy

Public React, JavaScript, and full-stack repositories.

CORE TECHNICAL SKILLS

FRONT-END:

React (hooks, component architecture, state), modern **ES6+ JavaScript**, TypeScript, Vue exposure; SVG/Canvas data viz; jQuery on legacy pages

MARKUP & STYLING:

HTML5, CSS3, Flexbox/Grid, media queries, responsive & mobile-first, **pixel-perfect PSD/Figma** → **markup**, Bootstrap, animations/transitions, accessible contrast

PERFORMANCE:

Core Web Vitals (LCP/INP/CLS), Lighthouse, bundle/asset optimization, image optimization, cross-browser compatibility, **Chrome DevTools** (Console / Network / Performance)

CMS / ECOMMERCE:

WordPress theme & plugin work, **Shopify** / Liquid front-ends; familiar with BigCommerce & Magento storefront layers

BACK-END GLUE:

PHP / MySQL, AJAX/REST integration, Node; API design and the server-side work front-end features drag in

TOOLING:

Vite, npm, **Git** / SVN, GitHub Actions / CI, Cloudflare Pages; **AI tools** (GitHub Copilot, Cursor, OpenAI) for boilerplate & troubleshooting

PROCESS:

Remote-first, distributed teams, code review, technical writing, multi-project delivery under deadlines, fluent written/spoken English

PROFESSIONAL EXPERIENCE

Principal Engineer & Founder**2024 – Present****Levelbrook Consulting LLC | Remote · Pacific Time**

- Run a principal-led contract engineering practice delivering **front-end and full-stack web work** for teams that need senior capacity without a long hiring cycle.
- Built **Beacon**, a React + Vite SEO & Core Web Vitals dashboard — animated **hand-coded SVG** score rings and gauges, an on-page SEO audit checklist, sortable keyword tables, a responsive-preview widget, and a persisted light/dark theme. No UI kit; pixel-perfect, fully responsive, deployed to the edge.
- Built **LinguaGuessr**, a React browser game with an interactive audio/map UI, daily seeded rounds, and a mobile-first layout tuned to eliminate overflow on small viewports.
- Shipped a **React viewer** over a 20k-image ML clustering pipeline — responsive masonry grid, lazy-loaded imagery, client-side filtering.
- Publish engineering write-ups and live demos at consulting.levelbrook.com; comfortable embedding with a team or owning a front-end workstream end-to-end.

Senior Software Engineer (Front-End & Full-Stack)**Aug 2019 – Present****Multi-tenant B2B SaaS Platform | Remote**

- Senior engineer on a small team through a multi-year growth phase; hands-on across UI delivery, web performance, and the API layer powering web, mobile, and partner front-ends.
- Led a **full customer-facing portal redesign** — rebuilt the interface, tightened responsive behavior across breakpoints, and cut render and interaction latency on heavy list and search pages.
- Audited heavy pages for slow rendering and oversized payloads; optimized queries and asset delivery so list, search, and reporting views stayed fast at scale (measured against real user-centric metrics).
- Built data-dense, interactive views (tables, filters, search, reporting) with a strong focus on **cross-browser correctness** and attention to detail.
- Collaborated daily in a remote, distributed team: code review, clear written communication, and shipping multiple projects in parallel under deadlines.

Web / Software Engineering Consultant**Jan 2017 – Aug 2019****Independent Contractor | Remote**

- Delivered front-end and full-stack contract work for startups and small businesses — responsive marketing sites, **WordPress** themes/plugins, web app UIs, and production fixes.
- Converted design comps into clean, responsive HTML5/CSS3, integrated with PHP/MySQL and JS back-ends, and handled cross-browser and mobile issues.
- Worked directly with founders and stakeholders to clarify ambiguous requirements and leave maintainable front-ends behind.

AVAILABILITY & ENGAGEMENT

US-based (Renton, WA), **Pacific Time**, available **full-time, 9:00am–6:00pm PST**, reliable workstation and internet. Open to full-time, contract, or contract-to-hire. **Levelbrook Consulting LLC** is set up for clean onboarding (MSA, SOW, NDA, W-9, COI) if a contract structure is preferred. Remote-first for 10+ years.
